

ZIP'IN 2

## Airbag for children

Not only adults need to be protected when riding, children also do, as they also share the risk of falling. That's why Helite has been offering a children's airbag range for several years. What's new? The Zip'in 2 airbag available for the youngest. Two dedicated sizes (Child M and Child L) which will allow children to benefit from an optimal protection.

Please note that the minimum weight to wear a Helite airbag is 35 kg.

Airbag adapted to the **child's morphology**.

**Second skin effect**, the airbag is light and does not move.

Technical **stretch** and **breathable** fabric, the airbag can easily be worn over a t-shirt or down jacket.

# Characteristics

## Close fit

Like a second skin, the airbag does not move when the child rides a pony or a horse.

## Lightweight

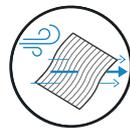

Featherweight (650g), the child forgets he is wearing an airbag even after several hours of riding.

## Stretch

Technical fabric that adapts to your child's growth (see size chart).

Moreover, thanks to its elasticity, you can wear it in summer as well as in winter, over a t-shirt or a down jacket, while keeping a great freedom of movement.

## Breathable

The airbag does not get hot, it is composed of many mesh parts for maximum air circulation.

## INVISIBLE AIRBAG, COMPATIBLE JACKETS

You can wear the Zip'in 2 airbag under compatible Helite approved outerwear. We work with a number of partner brands to ensure optimal and reliable protection.

and many more to come...

Unisex  
girl or boy

# Protection

## Protection of vital areas

The airbag is adapted to the morphology of children, it effectively protects the neck, back, hips, thorax, abdomen and sacrum.

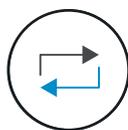

## Large volume of protection

For children, we offer 14 liters of protection. The perfect ratio to effectively absorb impact while protecting vital areas.

## Ultra-fast inflation

The airbag inflates in less than 100 ms, well before the impact on the ground.

## Reusable

Very simple and quick, just change the cartridge to put the airbag back into service. Children must be accompanied by an adult to perform this procedure.

# Sizes

Please note that the minimum weight of the child must be 35kg. Each child has its own morphology, our size chart is presented for information purposes only. We recommend taking measurements on a t-shirt.

Even if the airbag is stretchy and therefore can follow the growth of the child, as soon as the size does not correspond to the chart (too short, too tight) you must change it to keep a good protection.

| ZIP'IN 2    | cm        |           | inches  |         |
|-------------|-----------|-----------|---------|---------|
|             | Child M   | Child L   | Child M | Child L |
| Height      | 135 - 150 | 145 - 160 | 53 - 59 | 57 - 63 |
| Chest line  | 75 - 82   | 79 - 85   | 29 - 32 | 31 - 33 |
| Hip line    | 80 - 87   | 85 - 91   | 31 - 34 | 33 - 36 |
| Back length | 30 - 40   | 35 - 50   | 11 - 15 | 13 - 19 |
| Cartridge   | 50 CC     | 50 CC     | 50 CC   | 50 CC   |

# Quality

---

## Made in France

A guarantee of quality, the Helite team has been putting its expertise at your service for 20 years.

## CE certification

The Helite Zip'in 2 airbag is CE certified in accordance with the EU regulation 2016/425 by the certification body ALIENOR CERTIFICATION following the CRITT SPORT LOISIRS GEG-002 protocol.

# FAQ

---

## ? At what age can my child wear an airbag?

We don't think in terms of age, everything depends on his morphology and weight. Just follow our size chart and check that your child weighs more than 35kg.

## ? Why does my child have to weigh more than 35 kg?

In case of a fall, if your child holds on, he/she will not fall with all his/her weight and the traction force exerted will be weaker. We therefore take all the necessary safety measures to ensure that your child does not get stuck in the saddle and that the airbag system is activated correctly.

## ? Can the Zip'in 2 airbag follow my child's growth?

Yes, as long as the airbag always fits your child's body type and our size chart. Even if the airbag is stretchy, as soon as the size of the airbag is not adapted to your child (too short, too tight), you should change it to keep a good protection.

## ? Is the airbag ready to use when I receive it?

Yes, it is ready to use with an integrated cartridge, a saddle strap, an Allen key and instructions. You will need to install the stirrup strap on your saddle strap before using it for the first time.
